

Identity kit

Emir Cabalak · General AI Fluency, Week 3 · CUSTOM-MQX00WJN-0CE9EDFA

TYPE

Headings: Space Grotesk

Weights 500 and 600. Free, Google Fonts.

I break my own results

Fallback: Segoe UI, Helvetica, Arial, sans-serif

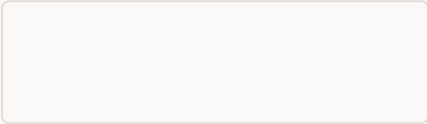

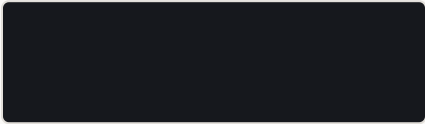

Body: IBM Plex Sans

Weights 400 and 600. Free, Google Fonts. Drawn for technical documentation.

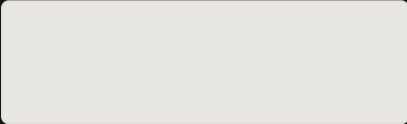

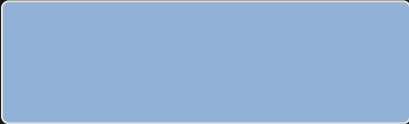

ROC AUC dropped from 0.91 to 0.84 once the leaking pair came out, and 0.84 is the number I report.

Two fonts, not three. I wanted IBM Plex Mono for metric tables and cut it: `font-variant-numeric: tabular-nums` on Plex Sans aligns the digits without a third download.

PALETTE

			
Paper #FAF9F7 · background	Ink #16181D · all text · 17:1	Main #2E4B6B · rules, headers · 8.8:1	Accent #C2410C · the one CTA · 4.9:1

Contrast ratios are against paper. All three pass WCAG AA for body text. The accent has exactly one job, the single call to action. If it starts appearing on subheads it stops meaning "click this".

			
Paper #14161A	Ink #E9E7E3	Main #8FB2D6	Accent #F0834D

Dark mode, same four roles lifted to survive a dark background. Lives in `tokens.css` behind a `prefers-color-scheme` block.

LOGO AND FAVICON

Emir Cabalak
numbers that hold up

logo.svg

favicon.svg at 64, 32 and 16 pixels

Lowercase, because *EC* in a box reads as a corporate badge and this is a person's site. Both are SVG with the same font fallback stack, so they render even before the webfont loads.

STYLE NOTE

Standing instruction in my Claude Project, so every build inherits it.

Fonts: Space Grotesk for headings, IBM Plex Sans for body. Colors: paper #FAF9F7, ink #16181D, main #2E4B6B, accent #C2410C, dark mode variants in `tokens.css`. Accent is reserved for the single call to action.

Mood: a lab notebook, not a brochure. Plain, quiet, and slightly technical, so the numbers and the writing are the loudest thing on the page. Generous white space, one column, no gradients, no shadows, no animation.

My claim is that my numbers hold up when someone checks them. A page with gradients and motion undercuts that before a reader reaches a sentence, because it is visibly trying to impress. Quiet is the same claim in another medium.

FILES

logo.svg · favicon.svg · tokens.css, the palette and the font stacks as CSS custom properties, imported by the live site · identity-kit.md, the written version of this sheet.
